

ASSET MONITORING PLATFORM

The JSSI Asset Monitoring Platform (AMP) is a unique web-based platform, developed to assist financial institutions with the management of financed aircraft. It represents a tri-party arrangement between the aircraft owner or operator, lender, and JSSI. AMP provides lenders with a comprehensive picture of an asset's historical utilization, in addition to its past and future obligations. AMP will notify lenders of key trends regarding their financed assets through alerts around an asset's flight, payment and maintenance activities

AMP INCLUDES

Up-to-date information on financed assets

Information on a lender's diverse fleet

Access to a team of technical advisors

Maintenance rating tool

Complimentary access for JSSI enrolled aircraft

Annual subscription for all aircraft not enrolled with JSSI

Exportable reports

MAINTENANCE TRACKING AND FORECASTING

AMP provides digital copies of maintenance logbooks and records to back up and verify an aircraft's maintenance history. With comprehensive maintenance programs to cover all aspects of an aircraft from Tip-to-Tail®, JSSI is uniquely positioned to provide a single-source data sharing platform that encompasses any fleet combination a lender might have. This unique market position means that JSSI can accurately predict the upcoming costs and date of any maintenance event on any platform. Additionally, AMP's built-in forecast tool provides a high-level snapshot of an entire fleet's maintenance exposure over the next seven years, broken down by number and cost of events.

ASSET VALUE SAFEGUARDING

AMP uses actual flight activity to plot where an asset is in its maintenance lifecycle and calculates the estimated financial exposure for upcoming maintenance events. With access to this data, lenders gain a better understanding of how an asset's upcoming financial exposure will impact the overall loan. Additionally, they gain insight into what an asset's maintenance exposure will be should a repossession occur. JSSI provides users with the most complete and comprehensive tool to assist in default risk mitigation and management of financed aircraft.
